AMENDMENTS TO THE SPECIFICATION

On page 14, lines 10-15 shall be amended as follows:

The equivalent ratio of amine compound(s) to borane compound in the complex is relatively important. An excess of amine is preferred to enhance the stability of the complex and in the embodiment where the decomplexing agent is an isocyanate functional compound to react with the isocyanate functional compound thereby resulting in the presence of polyurea in the final product. The presence of polyurea improves the high temperature properties of the composition. The organoborane amine complex can be present in an amount of about 1 to 8 percent by weight.
